

WH-5II WH-5FII

Volume Controller

Description

Serving multiple purposes, in-wall volume controls not only add convenience and accessibility, but also help to ensure you get the most from your amplifier. With a whole-house audio system, you'll enjoy great sound throughout your home, but the last thing you want to do is run up and down the stairs turning the volume up and down. Available in simple knob control or soft-touch sliders, these clever devices can match the style and décor of any room and puts control of your in-wall and in-ceiling speakers at your fingertips. These in-wall devices can be located in any room where you have speakers and allow you to control speaker levels independently in each zone or room.

Features

- 2-wire and 6-wire are applied to WH-5 II series.
- Power capacity can be extended to 30W, 60W, 120W & 200W.
- Combine with Program selector.
